

BUSINESS REQUIREMENTS DOCUMENT

VendorPulse

Vendor Performance & Risk Management Platform

A consolidated business analysis package defining the problem statement, stakeholder landscape, business and functional requirements, non-functional requirements, and requirements traceability for a centralized vendor performance and risk management system.

BUSINESS ANALYST DELIVERABLE

Prepared by	Raj — Business Analyst / Data Analytics
Document Type	Business Requirements Document (BRD)
Version	1.0
Date	July 22, 2026
Classification	Portfolio / Sample Project

Document Information

Project Name	VendorPulse — Vendor Performance & Risk Management System
Document Title	Business Requirements Document (BRD)
Prepared By	Raj, Business Analyst
Document Owner	Procurement / Business Analysis Function
Version	1.0
Status	Final for Review
Date	July 22, 2026

Revision History

Version	Date	Author	Description
0.1	Jul 2026	Raj	Initial consolidation of business problem statement, stakeholder analysis, and requirements
1.0	Jul 2026	Raj	Finalized BRD with requirements traceability matrix

Purpose of This Document

This document consolidates the business problem statement, stakeholder analysis, business requirements, functional requirements, and non-functional requirements for VendorPulse into a single reference package. It is intended to give stakeholders — and reviewers assessing business analysis work — a clear, end-to-end view of the problem being solved, who it affects, and what the system must do.

Document Structure

Section 1 defines the business problem. Section 2 profiles the five stakeholder groups and their needs. Section 3 lists the eight business requirements (BR) that describe organizational goals. Section 4 details the twelve functional requirements (FR) that specify system behavior. Section 5 covers ten non-functional requirements (NFR) governing quality attributes. Section 6 provides a requirements traceability matrix (RTM) mapping business requirements to the functional requirements that fulfill them.

CONTENTS

Table of Contents

1	Business Problem Statement
2	Stakeholder Analysis
	2.1 Procurement Manager
	2.2 Vendor Manager
	2.3 Department Manager
	2.4 Senior Management
	2.5 System Administrator
3	Business Requirements (BR-01 to BR-08)
4	Functional Requirements (FR-01 to FR-12)
5	Non-Functional Requirements (NFR-01 to NFR-10)
6	Requirements Traceability Matrix

SECTION 1

1. Business Problem Statement

Organizations typically engage multiple vendors for products and services. Vendor performance data — including delivery delays, product quality, SLA compliance, costs, and risk information — is frequently scattered across spreadsheets, emails, and disconnected systems.

This fragmentation makes it difficult for procurement teams and management to evaluate vendor performance, identify high-risk vendors, compare suppliers, track SLA violations, and make informed vendor selection decisions.

VendorPulse addresses this gap by providing a centralized vendor performance and risk management platform that enables organizations to monitor vendor performance, track key performance indicators, identify risk, manage SLA violations, and support data-driven procurement decisions.

Current State — Pain Points

- Vendor data spread across spreadsheets, emails, and siloed systems
- No standardized way to measure delivery, quality, cost, or SLA performance
- High-risk or underperforming vendors are hard to identify proactively
- SLA violations and vendor issues are not consistently logged or tracked
- Comparing vendors for sourcing decisions is manual and time-consuming

Future State — VendorPulse

- Single, centralized platform for all vendor information
- Standardized performance scoring across defined KPIs
- Automated risk classification (Low / Medium / High)
- Structured SLA violation and issue tracking with priority and status
- Side-by-side vendor comparison and management dashboards

SECTION 2

2. Stakeholder Analysis

Five stakeholder groups interact with VendorPulse, each with distinct responsibilities and system needs.

Procurement Manager

PRIMARY BUSINESS USER

- Monitor vendor performance
- Compare vendors
- Review SLA compliance
- Make vendor selection decisions

Vendor Manager

OPERATIONAL USER

- Add and update vendor information
- Track vendor performance
- Record SLA violations
- Manage vendor-related issues

Department Manager

BUSINESS STAKEHOLDER

- Review vendor service quality
- Report vendor-related issues
- Provide vendor performance feedback

Senior Management

DECISION MAKER

- View vendor performance dashboards
- Identify high-risk vendors
- Review vendor costs and performance trends
- Support strategic procurement decisions

System Administrator

SYSTEM MANAGEMENT

- Manage user accounts and access permissions
- Maintain system configuration
- Ensure data security and system availability

SECTION 3

3. Business Requirements

Eight business requirements define the organizational goals VendorPulse must satisfy.

ID	Requirement
BR-01	Provide a centralized platform to manage vendor information.
BR-02	Enable procurement teams to monitor and evaluate vendor performance.
BR-03	Track key vendor performance indicators, including delivery performance, product quality, cost efficiency, and SLA compliance.
BR-04	Identify and highlight high-risk and underperforming vendors.
BR-05	Enable users to record and track SLA violations and vendor-related issues.
BR-06	Provide vendor comparison capabilities to support procurement decisions.
BR-07	Provide dashboards and reports for management to monitor vendor performance and risk trends.
BR-08	Provide role-based access to ensure users can access only authorized features and information.

SECTION 4

4. Functional Requirements

Twelve functional requirements translate the business requirements into specific system behavior.

ID	Requirement
FR-01	The system shall allow authorized users to add, view, update, and deactivate vendor profiles.
FR-02	The system shall store vendor information including vendor name, category, contact details, contract details, and current status.
FR-03	The system shall allow users to record vendor performance data including delivery performance, product quality, cost efficiency, and SLA compliance.
FR-04	The system shall calculate an overall performance score for each vendor based on defined performance indicators.
FR-05	The system shall classify vendors into Low, Medium, or High Risk categories based on performance and compliance criteria.
FR-06	The system shall allow users to create and track SLA violations and vendor-related issues.
FR-07	The system shall allow issues to be assigned a priority level and status.
FR-08	The system shall allow procurement managers to compare the performance of multiple vendors.
FR-09	The system shall provide dashboards displaying vendor performance, risk levels, SLA violations, and performance trends.
FR-10	The system shall allow authorized users to filter and search vendor records.
FR-11	The system shall generate alerts for high-risk vendors and unresolved SLA violations.
FR-12	The system shall provide role-based access for Procurement Managers, Vendor Managers, Department Managers, Senior Management, and System Administrators.

SECTION 5

5. Non-Functional Requirements

Ten non-functional requirements govern the quality attributes VendorPulse must exhibit.

ID	Category	Requirement
NFR-01	Performance	Standard dashboard pages shall load within 3 seconds under normal operating conditions.
NFR-02	Security	Role-based access control shall prevent unauthorized access to vendor and business information.
NFR-03	Availability	The system shall be available to authorized users during standard business operating hours with minimal downtime.
NFR-04	Scalability	The system shall support an increasing number of vendors, users, performance records, and SLA issues without significant performance degradation.
NFR-05	Usability	The system shall provide a user-friendly and intuitive interface enabling common tasks with minimal training.
NFR-06	Data Integrity	The system shall validate required fields and maintain accurate, consistent vendor performance data.
NFR-07	Auditability	The system shall maintain records of important changes to vendor profiles, risk classifications, and SLA issues.
NFR-08	Compatibility	The system shall be accessible through modern desktop web browsers.
NFR-09	Reliability	Vendor performance and issue-tracking data shall be stored reliably and be recoverable in case of system failure.
NFR-10	Maintainability	The system shall be designed to allow future enhancements with minimal impact on existing functionality.

SECTION 6

6. Requirements Traceability Matrix

The matrix below traces each business requirement to the functional requirement(s) that fulfill it, ensuring every business goal is covered by defined system behavior and that no functional requirement exists without business justification.

Business Req.	Business Requirement Summary	Mapped FR(s)	Coverage Rationale
BR-01	Centralized vendor information platform	FR-01, FR-02, FR-10	Vendor profile CRUD, structured data storage, and search/filter deliver a single system of record.
BR-02	Monitor and evaluate vendor performance	FR-03, FR-04, FR-09	Performance data capture, scoring, and dashboards enable ongoing evaluation.
BR-03	Track delivery, quality, cost, and SLA KPIs	FR-03, FR-04	KPI data recording and score calculation directly implement the tracked indicators.
BR-04	Identify high-risk / underperforming vendors	FR-05, FR-11	Risk classification and automated alerts surface high-risk vendors proactively.
BR-05	Record and track SLA violations and issues	FR-06, FR-07	Issue creation with priority and status supports full lifecycle tracking.
BR-06	Vendor comparison for procurement decisions	FR-08	Multi-vendor comparison directly satisfies this requirement.
BR-07	Dashboards and reports for management	FR-09	Dashboards covering performance, risk, and SLA trends fulfill reporting needs.
BR-08	Role-based access to authorized features	FR-12	Defined role-based access for all five stakeholder roles implements this requirement.

Traceability Summary

All 8 business requirements map to at least one of the 12 functional requirements, and every functional requirement traces back to a business need — confirming complete, bidirectional coverage with no orphaned requirements on either side.
